However, I believe that there are a lot of other things that could be improved. Agencies that offer Lightroom publishing already use it to manage their files and create websites. The fact that Lightroom lacks a directly built-in page builder is a shame, but most of the major providers of desktop publishing tools offer a template-based way for users to create content. Yet, this is a user-friendly way to build a site without having to spend hundreds, if not thousands, of dollars on a professional-grade publishing tool. It's also good to note that the new update adds some new page building options, such as table of contents and glossary tools, but Adobe doesn't make it easy to set up a custom template, or store custom layouts within the shelves. The ability to draw shapes and lines with the Apple Pencil and the iPad Pro Pencil are great, but as a one-time editor getting a three-page letter sized drawing paper is helpful. If that isn't possible easily, then a bigger canvas is essential. The iPad Pro with Apple Pencil can do a lot of things with a full size tablet, but the size of the screen is still unrivaled. It has a resolution that equals a common drawing tablet used for years—an A4 page with a 300 DPI resolution, or 1:1 pixel accuracy. The iPad Pro with Apple Pencil has no problem reproducing the artwork of a high-quality paper printer, printing high-res images with obsessive detail. Sketch is an amazing app. With it, artists can create and share drawings and illustrations on the go. Unlike a sketchbook, a simple iPad Pro with a Pencil and a drawing tablet is already set up for sketching. You don't need to look for a peculiar object or a notebook to pull out. The iPad Pro with Apple Pencil is the perfect compact drawing tool. It's durable and portable. The Apple Pencil isn't prone to needing a recharge, and the iPad Pro can tell if you've lost your Apple Pencil or not.
